TOPIC (TOEFL essay):

High-school students should study many different subjects or only three to four subject.

I believe, ~~for high school students,~~ studying extensive academic subjects benefits ~~high school students~~ them more than limiting ~~themselves~~ to several specific disciplines.

No doubt, focusing on limited subjects allows students to ~~obtain~~ obtain profound, specialized knowledge. However, ~~a~~ high-school education should be an important stage for students to ~~develop~~ develop in an all-around way. ~~From~~ In this ~~perspective~~ perspective, studying extensive disciplines ~~plays~~ serves both specific and ~~general~~ general functions.

Firstly, studying ~~diverse subject matter~~ broad arouses each student's interests ~~in~~ exploring specific fields, which benefits them in ~~the~~ a long term. As we ~~know~~ have known, interest is the best teacher. For teenagers in high-school, restricting ~~themselves to a~~ on few subjects will sooner or later result in boredom. On the contrary, through exploring different subjects, we will ~~clearly discover~~ know well about what we are good at and interested in. Preparing ~~ourselves for our adept things,~~ making an ideal judgement before entering universities and selecting ~~major~~ the correct major becomes ~~much more~~ easier. For me, I ~~have~~ has been interested in social science from high school ~~and even though I choose~~ management, a synthesized social science, as my major. Now, I still ~~try to locate~~ scoop knowledge ~~in~~ of this field ~~to~~ and determine my ~~career-~~ future career ~~on which are arising from it.~~ In a short, learning various disciplines opens ~~up the~~ high possibilities for students to find their interests and develop their full potentials.

Moreover, the biggest initiative/~~main purpose~~ of ~~a~~ high-school education is to help students obtain ~~the~~ common knowledge ~~about~~ of life and science. Such elementary sciences, including physics, biology, geology and history, offer us a rich understanding of ~~the~~ daily phenomenon. For example, why do plants grow and flowers bloom? Why does a day have 24 hours? And, why are males ~~s~~ and females ~~s~~ different? We can gain/~~learn~~ these answers through studying various curriculums rather than only three or four subjects. These life sciences pave the path for us to gain ~~a comprehensive~~ an all-sided understanding/~~comprehension~~ about this world rather than one-sided ones. A proper knowledge base also ~~benefits~~ benefit us in ~~our~~ a lifetime no matter what professions we are in.
